

More world records.

8-32x56 Precision Benchrest

12-42x56 Precision Benchrest

The Precision Benchrest series represents the industry's highest level of performance in high power, variable magnification. Since 1993, Nightforce Precision Benchrest riflescopes have won more world records in long-range benchrest competition—this includes world records in 50 BMG, 1,000 yard benchrest—than any other riflescope. The Precision Benchrest Series earns the respect of the world's best shooters everyday at the range.

The Precision Benchrest 8-32x56 and 12-42x56 models boast the industry's most impressive features. A 50mm multi-coated objective lens provides the resolution necessary to distinguish fine detail at extremely long ranges. An adjustable objective provides extra-fine focus to adjust parallax from 25 yards to infinity. The target turrets are calibrated in true 1/25 MOA (1/8 click) value and can be reset to zero after sighting in. The Precision Benchrest Series is equipped with a coil plunger adjustment return system to maximize tracking accuracy, a quick diopter-style eyepiece for fast focusing and a glass-etched illuminated reticle to provide ideal image/reticle contrast.
