

# HOWA ADVANCEMENTS FOR 2011

## NEW BLACK BOLT ON ALL MODELS

For 2011, all blued Howa M-1500 rifles will feature a blued bolt in lieu of a polished, bright bolt. The blued bolt makes your Howa rifle stand out, and really looks good in all rifle stocks.

If you choose a stainless model rifle, your bolt will have a matte silver finish.

## NEW FLOOR PLATE ETCHED WITH THE HOWA LOGO

A "cool factor" feature on all new Howa M-1500's for 2011 is the addition of an etched floor plate for the magazine. Your new Howa rifle will stand out with a gold filled Howa logo on blued models, and a black filled Howa logo on stainless model rifles. Show your Howa pride, and keep your buddies from pulling your gun from the rack at the range or hunting camp!

## NEW DETACHABLE MAGAZINES FOR YOUR HOWA OR WEATHERBY VANGUARD

Get more firepower from your Howa M-1500® or your Weatherby® Vanguard®! These new removable magazines from Adaptive Technologies, Inc. are available in 10 round capacities for your .223 or .308 caliber Howa M-1500 or Weatherby Vanguard, with .22-250 coming soon! Made for target shooters and varmint hunters, these polymer body magazines allow you to turn your four round box magazine into a high capacity detachable. Available for aftermarket conversions only, the new magazines come with a special trigger guard housing that replaces the existing floorplate of your Howa M-1500 or Vanguard. Will fit Smith & Wesson and Mossberg Howas. Call us at 1-800-553-4229 for ordering details!

## ADDITION OF FLUTED BARRELS

For 2011, select models of Howa M-1500 rifles will be available with an optional fluted barrel. Fluted barrels reduce weight and dissipate heat more quickly than non-fluted barrels of the same outside diameter. This means your rifle is easier to carry and to control during shooting, and repeated, rapidly fired rounds will not heat the inside of the barrel for as long a period, or as hot as the same number of rounds fired through a non-fluted barrel.
